A BEAM OF LIGHT THATS SO POWERFUL IT TRAVELS MORE THAN 400 METERS We took everything that we expect from a firearm light and

made it better O2 Technology was designed to compliment the way our eyes naturally view light and it essentially doubles the output of visible light by focusing the intensity of the beam

beam coming out of the second polarizer (the analyzer) will go from zero to full intensity as the polarizer is shifted If the light is circular, then no change of intensity will be noticed In the event that an odd sized waveplate was used, then elliptical light would produce a series of minima and maxima of intensity
